

my_raii_class

Data Part

private internals
handled resource

Algorithm part

public API

- ctor/dtor
- accessor ...

access

The diagram illustrates the structure of a `my_raii_class`. It is enclosed in a large magenta rounded rectangle. Inside, there are two main sections: a 'Data Part' at the top and an 'Algorithm part' at the bottom. The 'Data Part' is represented by a light red rounded rectangle with a thick red border, containing the text 'private internals' and 'handled resource'. The 'Algorithm part' is represented by a light blue rounded rectangle with a thick blue border, containing the text 'public API' and a bulleted list: '- ctor/dtor' and '- accessor ...'. A curved black arrow labeled 'access' points from the 'Algorithm part' up to the 'Data Part', indicating that the algorithm part provides access to the data part's internals.
